

Setting Up for Success: UKG's Safety Toolbox

Leverage your UKG solution to minimise risk and keep your employees, customers, and organisation safer through the pandemic and into the future.

Your UKG solution can help your team deal with the impacts of COVID-19 as quickly as possible, minimising business disruption and ensuring that your employees are kept safe. Managers have visibility into which employees are vaccinated and timekeeping data to trace which employees need to isolate should someone test positive. Your entire organisation is supported by accurate, up-to-date information that allows you to quickly adapt to reduce risk. Check out UKG's Safety Toolbox to ensure you are taking advantage of all the resources your UKG solution offers.

COVID Home Dashboard

Use the COVID dashboard for a single point of access to all the resources you need to set your organisation up for safety and success. Interactive tiles and data visualisations highlight key COVID metrics, areas needing action, and forecasts to ensure business continuity.

Contact Tracing

Leverage historical and real-time attendance data to quickly identify employees, shifts, or sites who may have been a close working contact with employees who have tested positive. These automated reports allow organisations to act with urgency using accurate information.

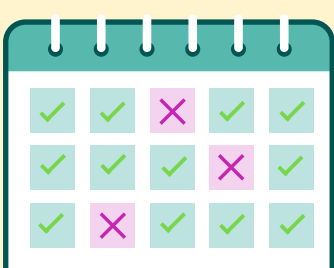

Attestation

Allow your employees to verify their health status by attesting to configurable questionnaires related to COVID symptoms prior to starting their shift. Attestation reports flag potential risks and store a history of responses.

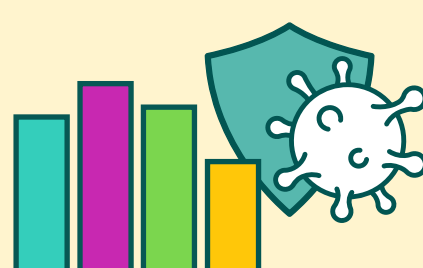

Vaccine Management

Record and maintain a formal log of any vaccinations required of employees. These records can be used to ensure compliant and safe scheduling with vaccination requirements.

Leave Management

Manage paid time off that is required as a result of COVID disruptions in accordance with regulatory requirements. If an employee is a close or casual contact, or is diagnosed with COVID, organisations will need to act quickly in facilitating leave, filling shifts, and complying with employee pay obligations.

Case Tracking

Ensure awareness of present and past cases of COVID within the organisation through detailed reports. Prioritise employee wellbeing across your organisation and be prepared if an outbreak occurs.

Contactless Employee Self-Service

Capture accurate timekeeping data in an entirely contactless format. Employees can utilise the UKG mobile application and employee self-service to clock-in and clock-out, as well as access all of their workplace information through a single platform.

UKG Online Community

Connect with UKG customers and solution experts through UKG's online community. Have access to our ongoing COVID discussion group and resource centre, featuring best practice guides for risk minimisation and opportunities to collaborate on the solution roadmap.
