

Carrier Connectivity

Keep benefit information in sync with carriers through secure, automated connectivity

Delivering benefits enrollment and life-change event data to carriers is essential to ensure your people have access to their benefits when they need them most. With our offering, you can increase your efficiency and reduce the risk of errors by automating carrier connectivity through EDI connection, API, or flexible SmartForms™, creating a direct line of communication to your network of providers, regardless of your organization's size. Plus, you'll receive proactive notifications when items need attention so you can take action before a file is sent, increasing your file success rates. In addition, an intuitive dashboard provides you with visibility into your benefits adds, changes, and terminations at a top level, but also lets you easily drill down to get information at an individual employee level as well.

Automate Connectivity

Automatically and securely deliver benefits data from open enrollment, new hire, terminations, or any other event directly to carriers of all benefit types including health, voluntary, dental, and more.

Eliminate Manual Enrollments

With Smart Forms™ you don't have to worry about carriers not accepting EDI files; the system will auto-populate the appropriate digitized form and send it to carriers, eliminating manual key-in enrollments on carrier sites.

Get Up and Running Quickly

Take advantage of 600+ connections to carriers, reducing the time it takes to get carrier connections set up so you can get your benefit information to carriers quickly.

Key benefits

Eliminate manual enrollments by utilizing secure, automated EDI connection, API, or flexible SmartForms™ regardless of company size.

Increase your file success rate with proactive data monitoring and notifications identifying potential file data issues before they are sent to carriers.

Gain visibility into your top-line benefits information such as benefits adds, changes, and terminations on an intuitive dashboard.

Easily drill down to get a more granular view of benefits data, allowing you to review and compare previous benefits information delivery, monitor historical trends, and understand how benefits are being leveraged.

Key Features

- Automated connections via EDI, API, and flexible SmartForms™ to over 600 carriers.
- Proactive, continuous data monitoring and notifications for data updates or changes.
- Intuitive dashboard to gain insight into top-line benefits information.
- Powerful reporting with drill-down capabilities into benefits information delivery, historical trends, and benefit adoption.
