

Nonproduction Environments

Additional tenants are available to meet your specific needs

As part of the UKG Pro Workforce Management™ (formerly UKG Dimensions®) solution, customers are provided with a standard production environment and a partial copy nonproduction environment. In addition to the included nonproduction environment, UKG® offers additional, fee-based nonproduction environments to meet all your project needs.

Nonproduction tenants provide the ability to create Development, Quality Assurance (QA), User Acceptance Testing (UAT), Staging, or Training environments. These additional nonproduction tenants are limited to 18 months of transactional data.

Intelligently powering the next generation of workforce management, all UKG Pro WFM environments are powered by the UKG Platform and include:

- A robust API and integration framework that provides extensibility and simplifies integration with other systems with time-saving prebuilt connectors for people, payroll, accruals, and more
- Artificial intelligence that drives smart, predictive solutions, including power k-means clustering algorithms to identify compliance risks in real time and market-leading machine learning applications that dramatically improve forecast accuracy
- Blazingly fast in-memory cloud computing that offers immediate insight into critical cost, compliance, and productivity metrics by delivering real-time computations at massive scale
- An evolved domain model based on decades of workforce management experience that provides flexibility and consistency across the suite to help you solve even the most complex business problems from anywhere in the application
- A unified information architecture that gives you complete data access for on-demand reporting and analysis — with no need for special technical expertise

Workforce management in the modern cloud

UKG Pro WFM environments are hosted in the Google public cloud, which leverages Google’s substantial investments in infrastructure, networking, and security.

In addition, all UKG Pro WFM environments leverage Boomi, a modern, scalable integration platform as a service (iPaaS) that supports all your application integration processes between cloud platforms, software as a service (SaaS) applications, and on-premises systems. Boomi supports common transport methods and a wide variety of enterprise integration scenarios while providing universal translation capabilities for nonstandard data formats.

Key benefits

Meet the needs of your business with multiple non-production environments

Reduce risk when developing and testing changes

Improve the user experience with acceptance testing

Enhance education with training courseware

Data Extraction Tool

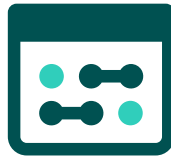

Once UKG Services implements the Data Extraction Tool, specified enterprise systems immediately benefit from the following UKG Pro Workforce Management views:

Realize greater value from your UKG investment

When it comes to integrating UKG Pro Workforce Management with other enterprise applications, UKG has you covered. Our experienced consultants leverage extensive technical expertise, proven Boomi iPaaS tools, and independently validated interfaces to address even the most unique and complex integration requirements.

With the Data Extraction Tool, implemented by UKG Services, you enjoy a fast, hassle-free implementation while protecting your investment in existing application technology. Just as important, you get the ability to combine workforce and operational data for critical insights and even greater business value.
