

A Unified Approach: The Integration of HCM and Workforce Management in the Energy Industry

Setting the stage for
a shared future

Introduction

Every human capital management (HCM) vendor offers a case for its approach to the market.

In the energy industry, you've heard them all. Maybe the vendor's pitch has been 100% about technology, positioning itself from day one as the cloud-based, software-as-a-service (SaaS) choice. Or maybe its angle has been that it's all about the company's marketplace approach and how it was modeled on the Salesforce app exchange. Other legacy vendors have their own approaches. Regardless of the positioning, they all share one key element: They all separate HCM from workforce management.

It's time to go beyond that narrow thinking and embrace an HCM strategy that focuses on your most strategic and important asset — your people — rather than solely on talent management processes. Analysts and industry experts agree.

To stay competitive, mitigate compliance, and drive business growth, it's time to think more strategically about your entire workforce; the practices and processes required to effectively manage, engage, and retain all your people; and the technology that's needed to put your HCM strategy to work. In short, it's time that HCM technology offered a unified system to bring the power of workforce management solutions to the practices and processes involved in executing your holistic HCM strategy.

This eBook explains what that can mean for your entire organization. It also explores how the shared future of HCM and workforce management shifts the focus toward becoming a forward-thinking driver of a holistic HCM strategy to meet more of the challenges that both sides of the equation try to solve for.

The term 'human capital management' (or HCM) represents the entire range of practices and processes for managing people in an organization — which is a superset of talent management.

The Need for a Unified Approach: Setting the Stage for a Shared Future

It's no secret that workforce management systems have traditionally been focused on the hourly population, while HCM systems have typically been engineered to support the salaried professional.

HCM technology emerged from personnel and human resources to bring together capabilities and data in hiring, payroll, benefits, compensation planning, performance management, and other key functions. Beyond payroll, benefits, and basic HR functions, however, HCM solutions have been primarily engineered for programs that focus on the salaried worker's performance, development, and compensation.

On the other hand, workforce management solutions have focused on enabling organizations to manage, schedule, and pay their large nonexempt (or hourly) workforce. **This can be an extremely complex exercise for organizations of all sizes — from simply scheduling employees to capturing the data needed to maintain compliance with:**

- Work and pay rules
- Collective bargaining agreements
- Federal, state, and local labor laws such as FLSA and FMLA
- Fatigue management guidelines

Cobbled Together: First Attempts to Combine HCM and Workforce Management

HCM and workforce management solutions handle the incredible complexities associated with their different areas of focus, which especially holds true for the energy industry. Both are essential to master the many needs of the modern workforce — a population whose demographics are far different from what they were even a decade or two ago, when the concepts of HCM and workforce management came on the scene.

Four Telling Facts About Today's Workforce

About 66% of U.S. employees are **not engaged** at work.²

More than 1 in 3 American workers today are millennials (adults ages 21 to 36 in 2017), and in 2016, they surpassed Generation X as the largest share of the U.S. workforce.³

More older Americans are working: 20% of Americans 65 and older reported being employed full time or part time, compared to 12.8% in 2000.⁴

23% of utility workers are members of a union.⁵

Being able to engage the entire modern workforce starts with understanding all the factors that go into individual and business performance throughout your organization.

It's the first step toward bringing HCM and workforce management together to serve a holistic human capital strategy. The first efforts to develop solutions to meet that challenge have had their ups and downs.

Some HCM solutions that recognized the need to empower a more overarching human capital strategy added workforce management to their suites, but only as a bolt-on offering. The technology is not native, sophisticated, integrated, or intuitive enough to handle the complexity or harness the power of workforce data, especially when it comes to staying in compliance with complicated and ever-changing labor regulations. Legacy vendors of payroll solutions or benefits administration have similarly crossed over to offer workforce management tools, but time and attendance is certainly not their strong suit.

Most of these offerings require the user to pull data from various databases and run reports manually — or pay an outside vendor to do it. And while the software may look sleek and user friendly, workforce management data and functionality are most HCM solutions' weakest links. Most HCM solutions that have augmented their systems to provide workforce management tools simply don't have the horsepower, and their teams don't have the extensive product knowledge clients need to realize optimal value from their investment.

There is a better way to capitalize on the mutually reinforcing benefits of HCM and workforce management.

A New Mindset: A Holistic Strategy That Embraces Your Entire Workforce

The need for a truly unified HCM and workforce management system is not just about checking the box or making the numbers simpler. It's about making your people more effective, more productive, and more engaged throughout the employee lifecycle.

Only 9% of organizations believe they have a good understanding of the talent factors that drive performance.

It's about using all available sets of data that your organization collects on your people to drive more informed decisions and improve business performance. It's about looking at the full picture of your organization and using your daily workforce data to shed light on the effectiveness of your overall HCM strategy so you can make course corrections to keep results in line with expectations.

Full Visibility: Bridging What's Getting Done with How It's Getting Done

Workforce management captures that elusive and previously hard-to-quantify space between tracking employee work and understanding overall business performance.

It shines a light on what type of work your people are doing, when they do it, and how they do it. When overlaid with payroll, performance, productivity, or business results — data that's in the wheelhouse of HCM solutions — workforce management yields strategic insights about how your organization can optimize your employees to achieve better business outcomes.

If your organization relies on siloed workforce management technology, your managers can't take full advantage of the data at their fingertips. For example, a foreman needs to make sure they have enough employees available to deploy during a storm outage. But even more important, that foreman wants to make sure the scheduled employees are likely to: (1) show up; and (2) perform well.

To get those results, the foreman uses the organization's workforce management solution. They look at the available employees and determine which ones to schedule based on cost, seniority, skills, and attendance record (see Fig. 1). But to ensure that these employees are also some of the strongest performers, the foreman needs to see performance history that includes safety and reliability provided by HCM solutions (see Fig. 2). Without that insight, they are basing scheduling decisions on incomplete information — a drawback that could negatively impact sales results.

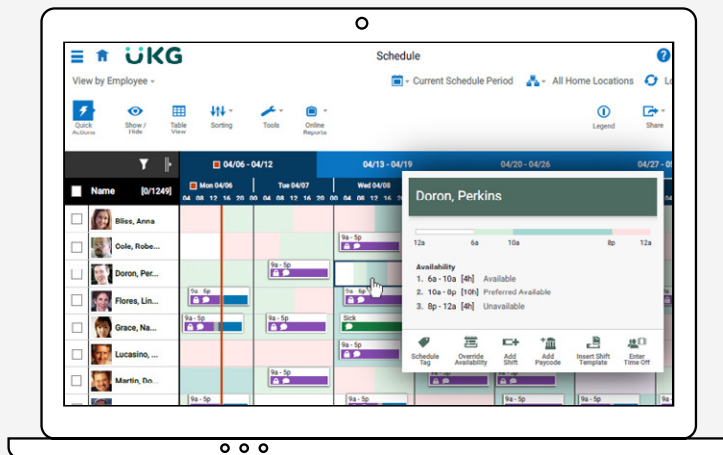

Figure 1: Employees and managers can easily access SaaS schedules to help manage their daily scheduling needs.

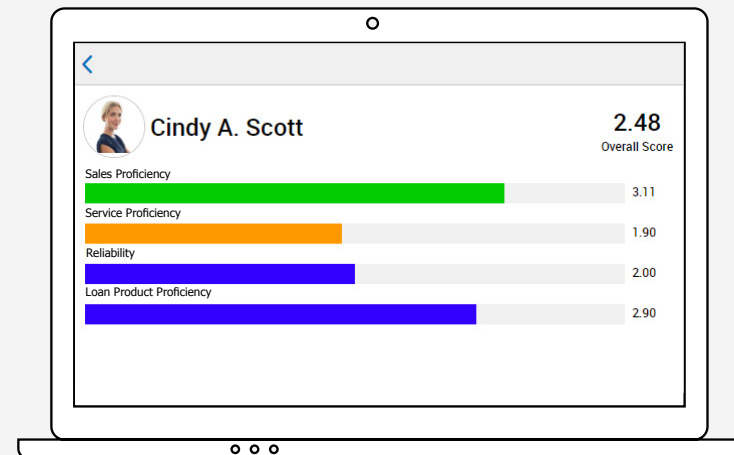

Figure 2: Managers can view their Team Perspectives to see overall team score and the factors that contribute to it.

A Single Source of Truth: Workforce Management as a Critical Component of Total HCM

Truly integrated workforce management and HCM provide your organization with a tool that's crucial for efficiency and accuracy — a single employee record.

With a centralized repository, authorized users across your organization can access all the available workforce data in one place and see how it all works together for a single source of truth. A unified platform for the entire workforce can give you a competitive edge by enabling a more complete understanding of business performance.

With integrated workforce management and HCM technology, your HR leaders can work smarter to cohesively carry out their many responsibilities:

- Driving performance and engagement
- Optimizing resources
- Developing and retaining talent
- Mitigating risk
- Managing compliance
- Processing payroll accurately and efficiently

When workforce management works with HCM, your organization has a well-oiled machine working in the background. Whereas capacity planning and management were previously clunky and inefficient, your users now have the data and insights they need to be more effective in their roles.

Most important, when workforce management is part of a unified HCM solution, it doesn't complicate routine tasks, frustrate users, or lead to disengagement; rather it works seamlessly with established business processes.

Gain an Advantage: Strengthen Your Total Talent Strategy with a Unified Solution

For optimal business performance, your organization can no longer merely balance HCM and workforce management solutions in separate silos. You need a solution that unifies the two and capitalizes on their mutually reinforcing capabilities.

A unified system is a win-win for everyone. For your employees, it helps meet growing expectations for fulfillment, autonomy, and engagement. Your organization, meanwhile, has transparency into the “people levers” that drive business performance.

With an integrated workforce management and HCM solution, your organization can better build and execute your total HCM strategy. Determining the right mix of employees for optimal performance requires data from HR, benefits, payroll, and timekeeping. You need to be able to understand your total cost of labor and exactly how many full-time, hourly, or salaried employees you need to meet business goals — all while staying on budget.

Without a single solution that addresses your entire workforce, you can't get an accurate picture of performance. If any of those pieces of data are taken away, the overall strategy suffers. Talent strategies supported by unified workforce management and HCM technology help create the competitive advantage and return on investment businesses like yours are trying to achieve.

With visibility into unplanned absences, managers can address potential problems before they affect labor costs, employee engagement, or customer commitments.

Where the Rubber Meets the Road: HCM and Workforce Management Working Together

Employee engagement is a hot topic in the worlds of HR and performance management today — and for good reason. Engaged employees are more willing to go the extra mile, so they are good for the bottom line. With a holistic HCM strategy, organizations can think differently about driving engagement. After all, the scores tell only half the story.

Consider this example. A maintenance supervisor may get a report from HR telling them that 88% of their employees responded to the engagement survey and reported being highly engaged in their jobs. This is confusing because, in reality, the manager has been experiencing ongoing issues with employees calling in sick, showing up late, or clocking out early. Despite the glowing reviews from the survey, the organization is actually falling short of productivity and service goals. So where's the disconnect? Overall engagement scores are high because the employees are satisfied with their jobs and the organization. But perhaps issues with equipment or the inability to take time off are causing them to call in sick or arrive late, which then affects productivity and, ultimately, profitability. A unified workforce management and HCM system with a single employee record would contextualize the engagement scores as well as the productivity numbers, helping the maintenance supervisor identify areas for improvement and take appropriate corrective action.

In another example, a combined workforce management and HCM solution allows an organization to use employee demographics to support operational performance.

A manager may realize that they have multiple employees who are regularly late for work and struggle with individual performance scores — creating poor overall business performance. An HCM system provides the data needed to identify the issue, explore root causes, and put a plan in place to rectify the problem.

Upon evaluating the data, the manager realizes that the frequent offenders all live 15 miles or more from the worksite. Understanding the root cause for this unusually low productivity, the manager is now empowered to seek a range of solutions — whether it's tailoring the recruiting strategy, adjusting workday start times, or simply having a conversation with the employees about their commuting experience.

A unified system empowers your organization to notice gaps, link relevant employee data easily, and make informed, timely decisions that engage employees and drive business performance.

Employees Benefit, Too: Drive Engagement with Unified HCM and Workforce Management

Business leaders and operational managers aren't the only ones who need a unified HCM and workforce management system.

Employees today want control over their work-life balance and expect a consumer-grade experience from their workplace tools. That's why your organization needs to empower employees with the right technology to manage their own day-to-day work environment if you hope to keep the workforce engaged and fulfilled.

For example, if a retail branch employee realizes they can't make their shift tomorrow, they can request a shift swap in a unified HCM and workforce management system, opening the opportunity to other employees who may want to pick up the extra hours. The ability to request the swap and communicate with the shift manager about the change in availability from any computer or mobile

device gives the employee flexibility and control in managing their time. This empowerment leaves them feeling more engaged and fulfilled on the job.

HCM can provide those tools, but without a unified solution, your organization is missing an opportunity to maximize engagement. Combining workforce management with HCM gives employees greater transparency into their schedules and greater ability to submit time-off requests, swap shifts, communicate with managers, and track their performance — all while providing HR and managers with the data they need to make informed decisions, increase efficiency, and drive employee engagement.

Make Workforce Management a Cornerstone of Your HCM Strategy

Today, success in financial services starts with thinking more strategically about managing, engaging, and retaining your entire workforce — both hourly and salaried — and leveraging the right technology to effectively execute that kind of holistic HCM strategy.

This requires a unified HCM and workforce management platform that draws data and metrics from the functions that traditionally lie in the purview of workforce management solutions and applies those insights to enhance the practices and processes in an HCM strategy. Take away any of those pieces, and the overall strategy suffers.

Your people are your organization's most valuable and strategic asset. Implementing holistic HCM strategies using technology that integrates workforce management and HCM solutions can put your organization on the path to increased efficiency, higher employee engagement, and improved business performance.

About UKG

At UKG, our purpose is people. As strong believers in the power of culture and belonging as the secret to success, we champion great workplaces and build lifelong partnerships with our customers to show what's possible when businesses invest in their people. One of the world's leading HCM cloud companies today, UKG and our Life-work Technology approach to HR, payroll, and workforce management solutions for all people helps more than 75,000 organizations around the globe and across every industry anticipate and adapt to their employees' needs beyond just work.
