

# Nonproduction Environments

## Additional tenants are available to meet your specific needs

As part of the UKG Dimensions™ (formerly Workforce Dimensions™) solution, customers are provided with a standard production environment and a partial copy nonproduction environment. In addition to the included nonproduction environment, UKG (Ultimate Kronos Group) offers additional, fee-based nonproduction environments to meet all your project needs.

Nonproduction tenants provide the ability to create Development, Quality Assurance (QA), User Acceptance Testing (UAT), Staging, or Training environments. These additional nonproduction tenants are limited to 18 months of transactional data.

Intelligently powering the next generation of workforce management, all UKG Dimensions environments are powered by the UKG D5 Platform™ and include:

- A robust API and integration framework that provides extensibility and simplifies integration with other systems with time-saving prebuilt connectors for people, payroll, accruals, and more
- Artificial intelligence that drives smart, predictive solutions, including power k-means clustering algorithms to identify compliance risks in real time and market-leading machine learning applications that dramatically improve forecast accuracy
- Blazingly fast in-memory cloud computing that offers immediate insight into critical cost, compliance, and productivity metrics by delivering real-time computations at massive scale
- An evolved domain model based on decades of workforce management experience that provides flexibility and consistency across the suite to help you solve even the most complex business problems from anywhere in the application
- A unified information architecture that gives you complete data access for on-demand reporting and analysis — with no need for special technical expertise

### Workforce management in the modern cloud

UKG Dimensions environments are hosted in the Google public cloud, which leverages Google's substantial investments in infrastructure, networking, and security.

In addition, all UKG Dimensions environments leverage Dell Boomi, a modern, scalable integration platform as a service (iPaaS) that supports all your application integration processes between cloud platforms, software as a service (SaaS) applications, and on-premises systems. Dell Boomi supports common transport methods and a wide variety of enterprise integration scenarios while providing universal translation capabilities for nonstandard data formats.

### Key benefits

**Meet the needs** of your business with multiple non-production environments

**Reduce risk** when developing and testing changes

**Improve the user experience** with acceptance testing

**Enhance education** with training courseware
