

The UKG TeleStaff Gateway Manager

Integrate with third-party systems and easily share important data

In today's public safety organizations, information exchange between software systems can be complex and daunting. Streamlining the exchange of scheduling and personnel information between solutions is imperative.

Workforce productivity depends on it. But with an endless array of file formats and field definitions to figure out, the temptation to leave disparate systems unintegrated may seem like the easiest solution.

The Gateway Manager allows you to share your UKG TeleStaff™ scheduling information to easily unify systems, saving significant time and effort. The result: a streamlined workflow that reduces errors and decreases the waiting time for access to information.

Application features:

Easily select and share data

Defining roster data from your scheduling solution and sending it to third-party systems is critical and should not be a time-consuming process. After all, why should you filter through countless fields only to settle on information that may or may not be needed? With the Gateway Manager, you don't have to.

The solution provides an out-of-the-box set of parameters already defined and ready for export to CAD, RMS, and time and labor systems. Users simply select which scheduling and/or personnel data to send, without having to worry about filtering through irrelevant fields.

Send data automatically or on demand to where it is needed most

The Gateway Manager delivers time-sensitive, tailored scheduling and personnel data automatically or on demand. With the Gateway Manager, exporting critical scheduling and personnel information is a streamlined process that helps you eliminate redundant work and increase productivity.

The UKG™ (Ultimate Kronos Group) strategy embraces business alliances that offer technology solutions that complement the UKG TeleStaff product suite. Through our business partner relationships, we are able to offer the public safety community integrated solutions that remedy broader workforce challenges.

Key Benefits

- **Connect** disparate solutions for a streamlined workflow
- **Eliminate** repetitive and overlapping work processes to increase accuracy
- **Reduce** errors with automated, simple exporting of information
- **Deliver** information faster with connected solutions
