

UKG GovTA

The UKG modern subscription platform

For two decades, UKG has been the market leader in supporting government agencies because it addresses the unique needs of the government workforce. UKG GovTA™ is a new product that builds on the best of previous experience and leverages knowledge from real-world government customer implementations. UKG GovTA combines that knowledge with leading-edge technology, superior user experience, and the future in mind.

UKG GovTA offers Title 5 and Title 38 feature sets and operates on a term license-based business model. This allows for flexible hosting options including:

- **Customer-managed hosting.** Agencies may opt to manage UKG GovTA directly from the agency’s cloud, over a single- or a multi-server network, or using on-premises hardware.
- **Shared service center (SCC) hosting:** Current SSCs and their customers can continue operating on a modern and more sustainable platform.
- **Third-party cloud hosting:** UKG can recommend hosting partner options and services for agencies interested in focusing on mission-critical tasks.

Key benefits

Open-source database options

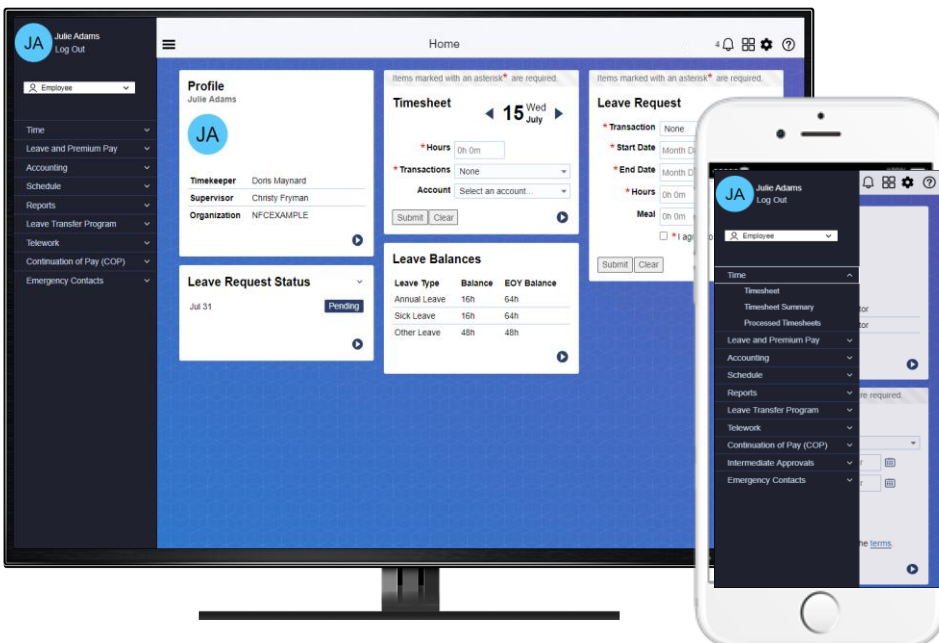

Flexible hosting options offer a term license-based business model.

Enhanced security provides private encryption key rotation.

Extension library groupings support different interpretations of Title 5 and Title 38 regulations.

Updated user interface allows users to quickly perform common tasks from a dashboard.

Responsive design adapts easily to mobile devices.
